Gold Freeze

Goldfreeze® - CERTIFIED WARMTH

We are one of Europe's fastest growing cold store, chill and freezer brands. We make great quality fully certified and widely used cold protection PPE.

Our mission:

To disrupt and change our sector with innovative, sustainably made and competitively priced products.

Our best-selling range of Cold Store clothing, made with sustainable DuPont™ Sorona® that breathes with your body, keeping you warm and comfortable as moisture evaporates through our unique polyester outer layer. Certified to EN342:2017

For warmth in the most extreme working environments. Made with higher density and sustainable DuPont™ Sorona® and our five-layer construction system to trap the warm air your body creates while moisture evaporates through the breathable outer layer. Certified to EN342:2017

Chill garments that are tough, flexible and warm. There is a style in our range for every application from gilets, jackets and trousers to our best selling Deep Fleece. Caribou® is certified to the EN342:2017 cold store standard but is also ideal for unheated ambient environments.

We have an extensive range of certified gloves, footwear & accessories to keep your team warm, comfortable and safe.

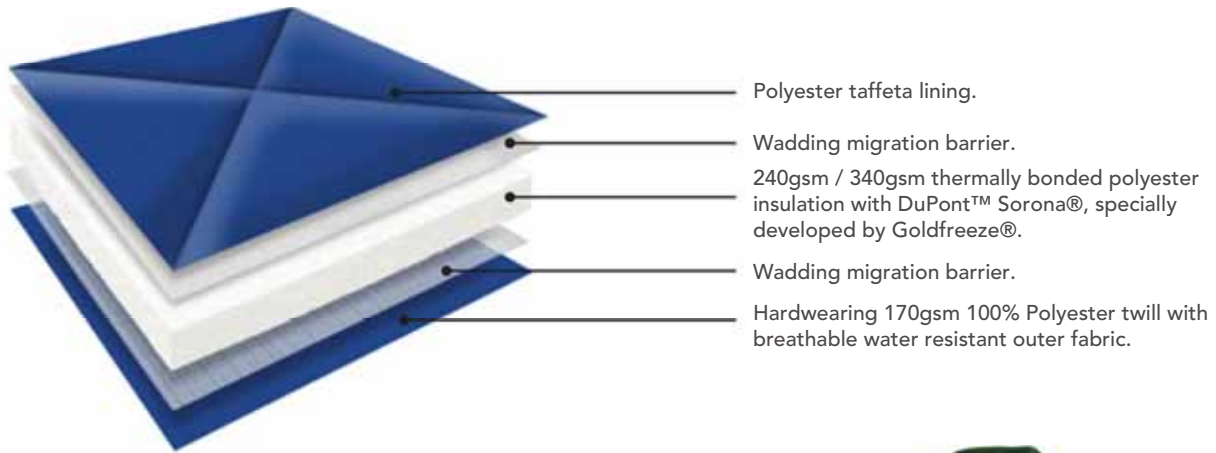

For more information & pricing contact your Goldfreeze® authorised reseller.

Industry leading cold protection

Our Hi-Glo range of cold protection PPE is specifically designed for use in the coldest, harshest environments. Our design concept is based on our unique 5-layer construction system that traps multiple layers of air within the garment that are naturally warmed by body heat thereby keeping you warm. The garment insulates to your own body temperature for maximum comfort, while our breathable materials allow excess moisture to evaporate as your body temperature fluctuates during the working day.

Materials

New for 2021/22 we have upgraded our best selling **Hi-Glo®** ranges with the latest in sustainable and innovative materials
 Insulation: Now made with DuPont™ Sorona® a sustainable plant-based material that offers maximum breathability, warmth and comfort
 Outer Layer: Made with a breathable water resistant soft polyester outer, adapted from ski wear that allows moisture vapour to evaporate while keeping warmth within the garment.
 Our **Hi-Glo®** products breathe with you and adapt to your body temperature as your work activity changes throughout the day.

Ultimate protection to EN342:2017

Superior performance to EN342:2017

New! Badging and personalisation

Standards

EN511 Gloves for protection against cold

Two things are measured with the glove: how the glove protects against convective (penetrating) cold, and its insulating capacity against contact cold.

The pictogram will be accompanied by a 3-digit code. The first digit shows resistance to convective cold. The second digit shows resistance to contact cold. (In both cases, performance is measured on a scale of 0-4) The higher the performance level the better insulating capacity.

The third digit shows permeability to water (performance level 0 or 1)

0 = water penetration after 30 minutes

1 = no water penetration after 30 minutes.

EN388 Gloves for protection against mechanical risks

Protection against mechanical hazards is expressed by a pictogram followed by four numbers (performance levels), each representing test performance against a specific hazard.

The pictogram will be accompanied by a 4-digit code.

The first digit shows resistance to abrasion.

The second digit shows cut resistance.

The third digit shows tear resistance.

The fourth digit shows puncture resistance.

(In all cases, performance is measured on a scale of 1-4).

EN342 Coldstore Clothing

This is the standard for ensembles and garments which provide protection against cold. Our Hi-Glo® 25 and Hi-Glo® 40 ranges conform to this standard.

The first figure below the pictogram expresses thermal insulation of the garment in m²*k/W, the higher the value the better the insulating properties.

The second figure denotes air permeability (1 – 3)

The third figure shows resistance to water penetration class (1-2 where 2 is best). This is an optional test as garments designed for use at low temperatures do not need to be waterproof.

ISO EN20345:2011 Safety Footwear

All safety footwear sold by Goldfreeze Ltd meets the requirements of this safety footwear standard - which means minimum 200J toe protection and oil resistant outsole - this is denoted as SB (safety basic).

The following additional criteria also apply:

SBP: As SB but also has a penetration resistant midsole.

S1: As SB but are also anti-static and have an energy absorbing heel.

S1P: As S1 but also has a penetration resistant midsole.

S2: As S1 but also has a water resistant upper.

S3: As S2 but also has a penetration resistant midsole.

S4: As S1 but has a waterproof polymer upper.

S5: As S4 but also has a penetration resistant midsole.

Slip resistance is also denoted by compliance with the ceramic tile test (SRA) and the steel floor test (SRB) or both (SRC)

CI or HI denotes the footwear insulates against cold or heat. HRO denotes heat resistant outsole.
