

***Mitten made of  
HT-glass fabric  
with special insulation***

***JUTEC®-item number:  
H2110030***

*These gloves made of HT-glass fabric are suitable for working with hot pieces up to 900°C short term. Especially the weight of the workpiece to be handled is important because it influences the transfer of heat. Due to the individual design the gloves double their useful life as they are ambidextrous and therefore cost-saving.*

*Application area: handling with hot castings, metal construction, working at furnaces, etc...*

- . Cut resistant, soft, flexible*
- . Ambidextrous*
- . Double insulated*
- . Length approx. 300 mm*
